

<p><b>Title of the project</b></p>	<p>Early identification of physical ill health in mental health patients</p>
<p><b>Tell us about the project in no more than 150 words</b></p>	<p>This project will have three components:</p> <ul style="list-style-type: none"> <li>• Working with KMPT physical health leads to adapt current processes and implement a robust and sustainable physical health monitoring process and policy (both completion and recording) which can be used across our community and inpatient services</li> <li>• Working with partners Kent Community Health Foundation Trust (KCHFT) and Local Care Teams to educate and enable them to implement screening and signposting pathways for common mental health disorders within their physically unwell and frail patient population and their carers</li> <li>• Working with commissioning colleagues and primary care mental health leads to establish regular and robust investigation and monitoring processes between primary and secondary care e.g. laboratory investigations and ECG monitoring</li> </ul> <p>As part of the overall project we would expect that audit standards and quality processes are created by the fellow and their associated colleagues to enable baseline and longer term monitoring of this legacy work.</p>
